

140 INDIVIDUAL NEEDLES

140 needles are evenly distributed according to the texture of the skin. Because of vertical delivery, needles easily penetrate scar tissue without risk of bending.

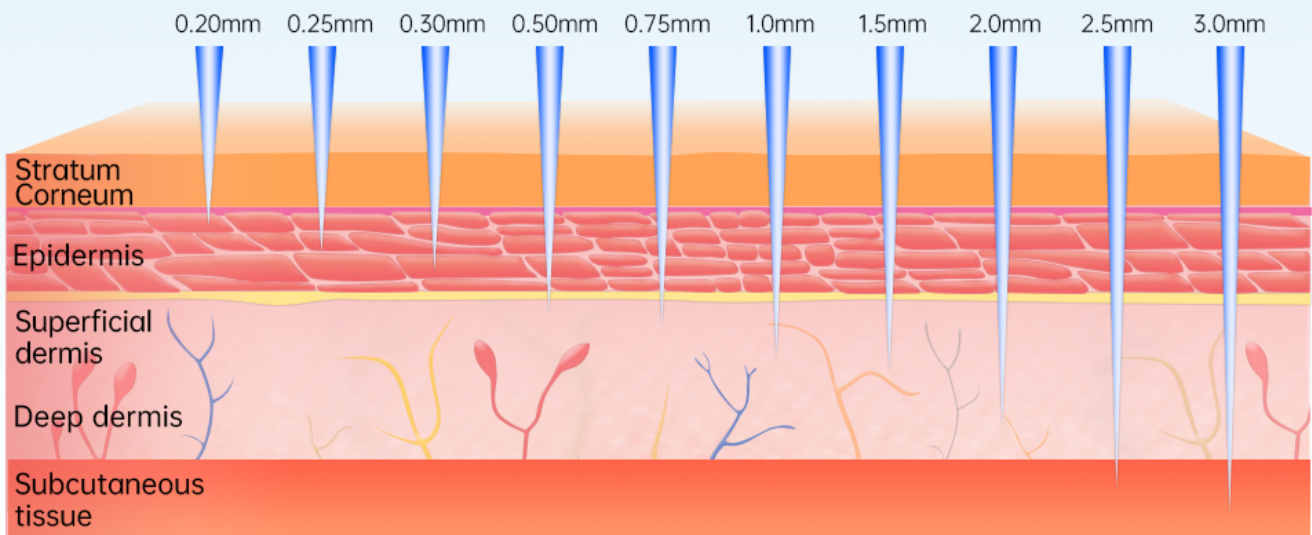

PERFECT NEEDLE LENGTH ENSURES WONDERFUL RESULTS

Different treatment zones require different needle lengths. A derma stamp with different lengths combined with a perfect serum would lead to amazing results. To regenerate the skin is not a one-time process, you may need several sessions to gain a glow and flawless skin.

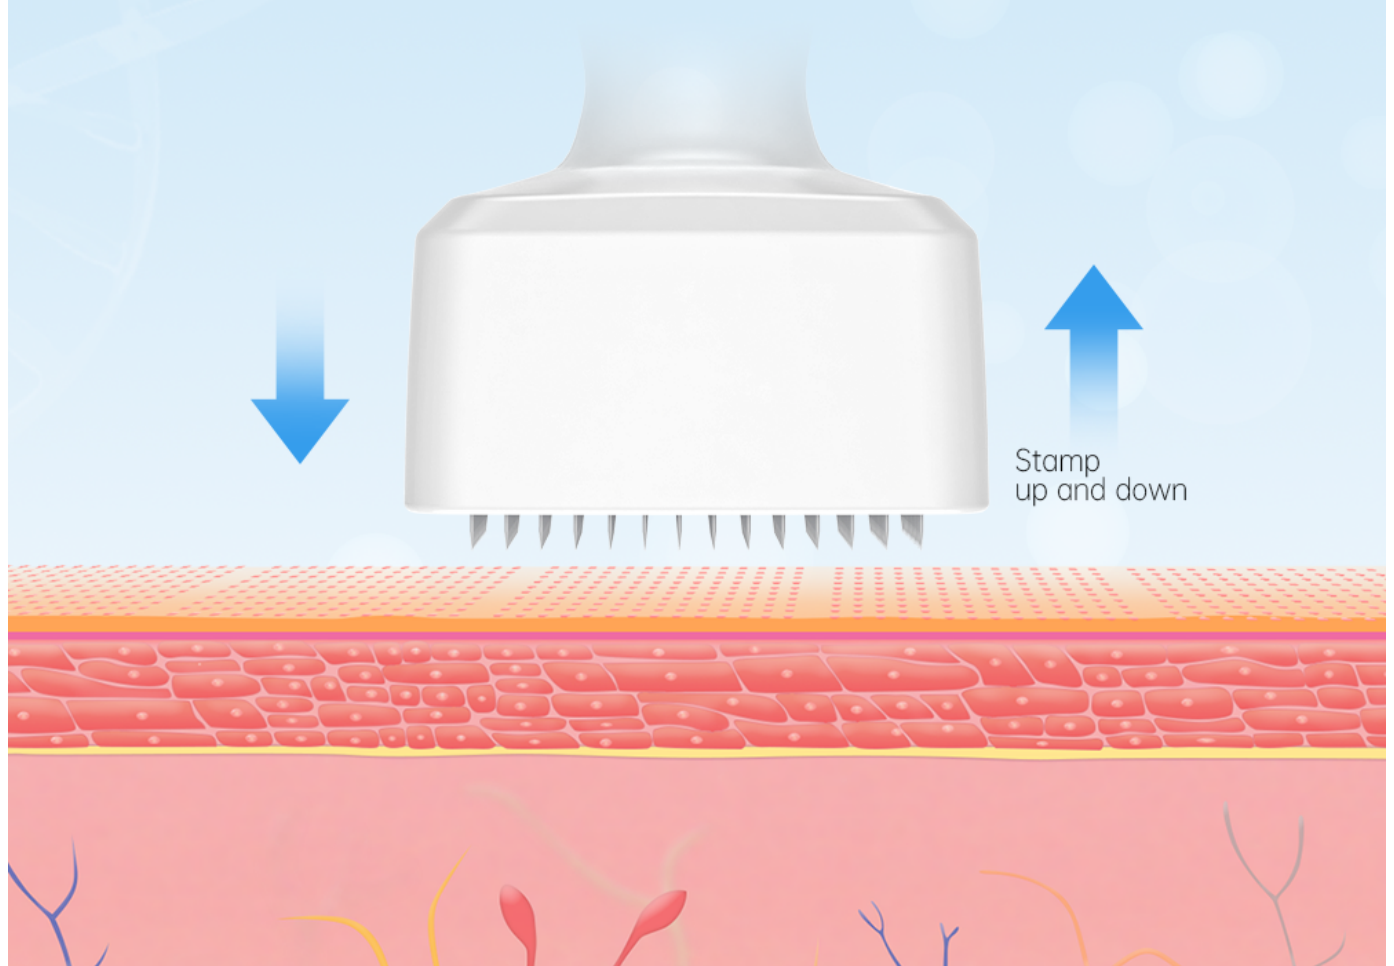

Length of the Microneedles

*The thickness of facial skin is about 1.5 mm. Needles longer than 1.5 mm are not suitable for use on facial skin.

STAMP STIMULATION THERAPY

Stimulate the skin's self-healing ability through up and down stamping techniques, promote the formation of new skin tissue, and accelerate collagen proliferation.

SAFER AND HEALTHIER

Prevent bacteria invasion, safe and hygienic
