

The world's first all-in-one light and tongue depressor

Easy-to-use design

- Allows one-handed, lighted oral cavity exams
- Reusable handle with changeable blades
- For use with Adult or Pediatric clients

Throat Scope®

No more complicated juggling of equipment. The **all-in-one** tongue depressor and flashlight for oral cavity examinations allows *one-handed* control during the entire process.

The light in the handle is guided by the blade, illuminating the inside of the mouth/throat to provide *fast, accurate, and pleasant* examinations. Just attach the blade to the handle and it lights up. Easy one-flick action removes the disposable blade from the handle.

Starter Kit Contains: Reusable handle with LED, battery, and 3 transparent blades.
